## Portfolio information

**Benchmark:** MSCI ACWI ex US Index<sup>1</sup>

### Portfolio profile

Price/earnings ratio forward	15.4x
Beta	1.00
Turnover ratio	26.1%

Price/Earnings ratio (P/E) is the price of a stock divided by its earnings per share. It gives investors an idea of how much they are paying for a company's earning power. The higher the P/E, the more investors are paying, and the more earnings growth they are expecting.

Beta rating attempts to measure relative risk. A beta rating of higher than one indicates greater relative volatility than the market. A beta rating lower than one indicates lower volatility than the market, as defined by the MSCI EAFE.

Turnover ratio is the percentage of a fund's holdings that have been replaced in the last year.

Annie Tan is a portfolio manager at Aperio Group, where she supervises Aperio's ESG/SRI portfolio management efforts. She earned her bachelor's degree in economics from the University of California, Davis, and her master's degree in financial analysis from the University of San Francisco.

## Fund information

### Objective

The Praxis International Index Fund seeks to capture the investment performance of developed and emerging international markets.

### Strategy

The Fund:

- Features an "optimized index investment strategy," meaning the returns are generated based on a representative collection of international securities.
- Draws investments from companies domiciled in the developed markets of Europe, Australia and the Far East, and 21 emerging markets.
- Seeks broad diversification among foreign countries and industries.
- Reflects the performance of international markets as measured by the MSCI All Country World ex-U.S. Index, subject to the Fund's stewardship investing guidelines.

### Risks

An investment in this Fund entails the special risks of international investing, including currency exchange fluctuation, government regulations, and the potential for political and economic instability. The Fund's share price is expected to be more volatile than that of a U.S.-only fund. Equity securities (stocks) are more volatile and carry more risk than other forms of investments, including investments in high-grade fixed income securities. The net asset value per share of this Fund will fluctuate as the value of the securities in the portfolio changes. Common stocks, and funds investing in common stocks, generally provide greater return potential when compared with other types of investments.

### About Praxis Mutual Funds

A leader in integrating values and cutting-edge impact investing strategies, Praxis Mutual Funds offers five mutual funds and three fund of funds. Through values-based screening, integrated environmental, social and governance factors, positive-impact bonds, corporate engagement, proxy voting and community development investments, Praxis investment options make a difference. Invest in impact, invest in what matters.
