All Praxis products are broadly diversified. All are consistent with our work to apply Praxis' faith-driven core values to serve our investors and the world.

To create our portfolios, we apply rigorous Values + ESG screens to exclude industries of moral concern as well as companies with exceptionally poor performance on environmental, social and governance (ESG) issues. We then incorporate various ESG integration strategies designed to strengthen the impact of Praxis portfolios.

Our equity products are broad-based index funds. In our actively managed fixed income fund, we take our impact a step further by specifically targeting investments that embrace positive change.

Foreign investments involve greater risks than U.S. investments, including political and economic risks and the risk of currency fluctuations. There are special risks associated with small capitalization issues, such as market illiquidity and greater market volatility than large capitalization issues.

Equity securities (stocks) are more volatile and carry more risk than other forms of investments, including investments in high-grade fixed income securities.

Investors in any bond fund should anticipate fluctuations in price, especially for longer-term issues and in environments of rising interest rates.
